* If you must harvest this corn, subtract the harvesting costs; and if you can only use dry corn, subtract drying costs. Of course the price you pay will be determined by supply and demand conditions in your area and negotiations between you and the seller, but unless there are special circumstances it should not be above the prices shown here.

** National Corn Handbook NCH 61 "Calculating Grain Weight Shrinkage in Corn Due to Mechanical Drying" demonstrates two methods for calculating total shrink. The value found in 3c is the constant shrink factor. Typical constant shrink factors range from 1.163 to 1.5% per point. You may allow the constant shrink factor to auto-calculate or directly enter the constant shrink factor used at a local elevator. The constant shrink factor found in 3b can not be less than the water shrink factor in 3a. 3b is used to calculate the % shrink.
